

HIGH-LEVEL STRATEGIC CONCEPT · TRACK 3 PUBLIC SECTOR

ida 2030 – From Answers to Action

Transform ida from an AI-powered information assistant into a fully functional digital government agent.

SPARK Team
Alice Hristov, Sudenur Yildiz, Tushna Kapoor, Fathy Shalaby

Digital Assistants: Evolution to 2030 · Federal Chancellery Challenge

AGENDA

What we will show you

1	**Vision & Mission**	Where ida is heading	01
2	**Situation**	ida today vs. ida 2030 · why now	02–03
3	**Users**	Our personas · customer journey	04–05
4	**Strategy**	Pillars · security levels · Project X · risks	06–09
5	**Impact & Roadmap**	How we measure success · path to 2030	10–11

From reactive portals to an agent that acts for you

VISION

A proactive service where public administration adapts to people's lives – and no resident is left behind.

MISSION

Give every resident a secure, authorised AI agent that guides them through public services, completes actions after their confirmation and protects their data sovereignty.

Resident in control

Owns the data, gives the final yes

Inclusion

Any language, ability or digital skill

Proactive equity

Benefits find people – not the reverse

Uncompromising trust

Secure, private, every access logged

ONE APP · ALL SERVICES

One app. Every service.

UNDERSTAND

Chat
Ask in any language

Phone agent
Just talk – no typing

Scan letters
Photo in, plain answer out

ACT

Applications
Pre-filled, you confirm

Face scan
Confirms critical actions

Appointments
Find and book a slot

STAY INFORMED

Reminders
Before deadlines and expiry

Benefit alerts
Benefits you may get

Live status
Like parcel tracking

STAY IN CONTROL

Vault
Your documents, verified

Data cockpit
Every data access visible

Human help
A person, anytime

ida today informs. ida 2030 acts.

ida today	ida 2030
✕ Chat in app and web	✓ One app for all: chat, phone agent, web
✕ German only	✓ Many languages, plain language and voice
✕ No access to personal data	✓ Data via Project X – Once-Only, with consent
✕ No document upload	✓ Reads photographed letters and forms
✕ Can't submit, book or remind	✓ Submits, books and reminds – after your yes
✕ Answers only when asked	✓ Alerts on deadlines and entitlements

The need is large – and the infrastructure arrives now

20.5 %

of residents are foreign nationals

Statistik Austria, 2026

30 %

of 16–74-year-olds lack basic digital skills

Federal Chancellery, 2025

~8 %

live with a registered disability

Statistik Austria, 2022

Why now

- ida live since 2026
- Project X: registers via dadeX by 2029
- AVG amendment: chatbot submissions

Silos

Many portals, no single journey

Slow

Long waits, e.g. MA 35

Workload

Repetitive calls, incomplete forms

Exclusion

German-only and analog paths

We design for the whole of society

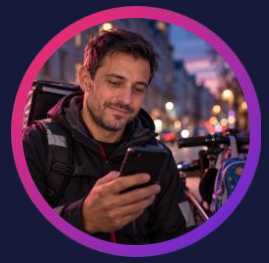

Martha, 72

Retired · rural · mild visual impairment

IDA MUST

- **Phone agent – just talk**
- **No typing, easy sign-in**
- **Alerts on pension benefits**
- **Analog option always open**

Marcus, 34

Delivery driver · father of two

IDA MUST

- **Automated, only short steps**
- **Family allowance alerts for his kids and himself**
- **Finds subsidies via Project X**

Patrick, 18

Student · grew up with AI

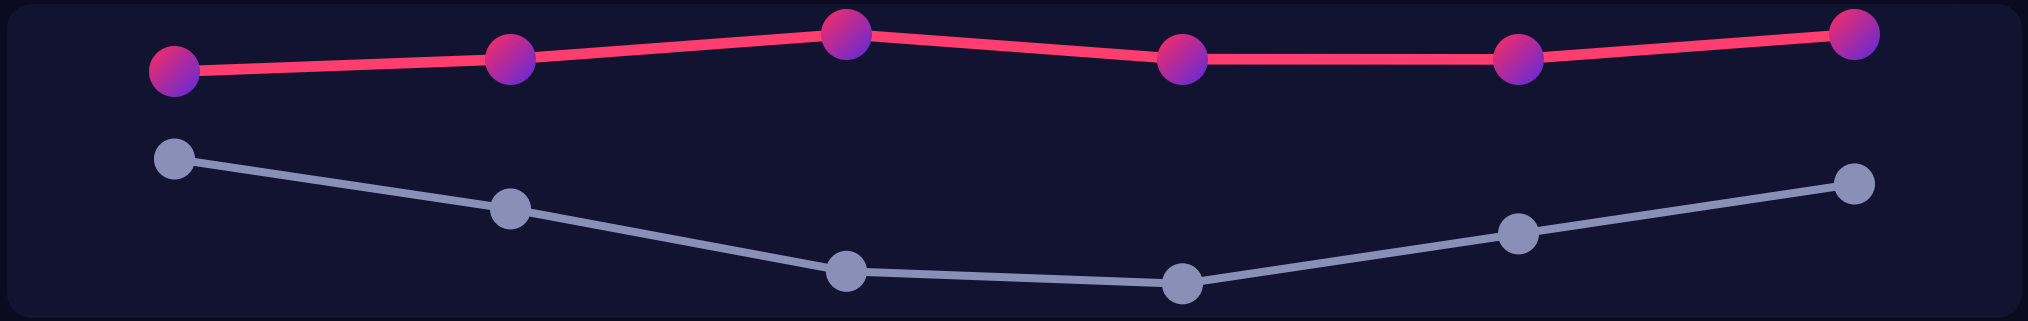

IDA MUST

- **Automated by default**
- **Alerts on youth entitlements**
- **No calls with people – push only**

Why these three? They are the edges, not averages: every life stage, low to high digital skills, rural and urban. If ida works for them, it works for everyone in between.

Today Marcus does the work. In 2030 ida does.

How it feels
- ida 2030
- today

	1 Trigger	2 Understand	3 Prepare	4 Submit	5 Wait	6 Done
Today	Hears about the subsidy by chance	Reads rules on many portals	Collects payslips and certificates	Fills in forms at night, errors	No status, calls the office	Forgets next year's renewal
ida 2030	**ida spots it and notifies him**	**Plain-language answer in his language**	**Data via Project X – nothing to upload**	**Pre-filled, confirm + face match**	**Live status like parcel tracking**	**Renewal reminder set**

Four pillars carry the platform

Proactive service

Reminders before deadlines, alerts on entitlements

One agent, all agencies

Federal, state and municipal services via Project X

Sovereign identity

ID Austria for every login, face match for critical actions

Human in the loop

Residents confirm, authorities decide, a person on request

Design principles: plain language (B1) · AI clearly labelled · federal corporate design · WCAG AA

Security that matches what is at stake

Basic actions

ID Austria login

- Ask questions, explain letters
- Talk to the phone agent
- View vault and documents
- Get reminders, book appointments
- Track application status

No smartphone or can't use face match? Verify once in person at a Digital Austria service point.

Critical actions

ID Austria + Face Match

- Submit applications
- Grant or change power of attorney
- Access sensitive data, e.g. criminal record
- Change personal data
- First login on a new device

Live scan with liveness check · compared with the passport chip photo · on device, no face data stored

Project X is the foundation. ida is the face.

Channels	One app: chat & phone agent · Web · Service point
Identity	ID Austria · face match for critical actions
ida core	AI · verified knowledge base · workflows
Data access	dadeX via the Portal Network – with consent
Registers	All registers and documents Project X provides

What this gives us

Once-Only: never ask for data twice

No new silo: data stays in the registers

Future-proof: registers connected by 2029

Our focus: AI grounded in verified content and automated workflows

Proposal: ida as authorised dadeX data consumer. Simulated in the prototype.

Every major risk has a built-in countermeasure

Hallucinations

Facts only from verified sources; if unsure, hand over

Data protection

Consent per purpose, no data copies, EU hosting

Wrong translation

Verified glossary; German original one tap away

Cyber attacks

Face match, audit log, regular hacker tests (pen tests)

Legal & AI Act

AI labelled; humans decide; high-risk rules met by 2027

Digital exclusion

Phone agent, service points, relatives, paper route

We measure public value, not clicks

Time saved

WE MEASURE

Minutes per application, today vs. with ida

TARGET

–50 %

Benefit uptake

WE MEASURE

Share of eligible people who actually apply

TARGET

Clear increase

Fewer errors

WE MEASURE

Incomplete applications at the authority

TARGET

–50 %

Public trust

WE MEASURE

Independent yearly survey of users

TARGET

> 80 % trust

Baseline: measured on today's process before launch · targets are assumptions we test in the pilot

Prepare until 2029, launch in 2030

2026–27 · 2028 · 2029 · 2030

Prepare

- Baseline & user studies
- Regulatory aspects
- Marketing for technical acceptance

Build & test

- Prototype to product
- Face match & security tests
- Tests with real users

Pilot

- One procedure (MA 35)
- Registers via Project X
- Measure against baseline

Launch

- All functions in one app
- Phone agent & alerts
- Nationwide, many languages

After 2030: new procedures and languages added step by step – as templates, without new code

The best application is the one you never have to submit

~ ida 2030
